

# HazMat Safety Consulting®

AN AMERICASE COMPANY

## CUSTOMIZED HAZMAT TRAINING DESIGNED FOR YOUR OPERATION

Hazardous materials training is one of the most frequently cited violations in the Department of Transportation (DOT) inspections.

That's where HazMat Safety Consulting (HSC) comes in. Our team of former U.S. DOT Pipeline and Hazardous Materials Safety Administration (PHMSA) regulators designs and delivers training programs tailored to your specific products, processes, and compliance obligations—so your employees get the knowledge they actually need.

**With HSC, customized training isn't just effective—it's protection, clarity, and peace of mind.**

### Training Built Around Your Business

Generic Dangerous Goods (DG) courses often waste valuable time covering materials and scenarios that don't apply to your operation. HSC takes a different approach.

We learn how your supply chain works, what hazardous materials you handle, and where your team needs the most clarity. Then we design a course that is:

- **Relevant:** Focused on the exact regulations, DG, and transport modes you use.
- **Efficient:** Reduces training time and cost by eliminating unnecessary content.
- **Compliant:** Aligns with DOT requirements for training content and training records. ▶

### Common Training Topics We Customize

HSC provides specialized training for a wide range of hazardous materials and operational scenarios, including:

- Small lithium batteries
- High-energy lithium batteries
- eCommerce & retail limited quantity shipments
- Engines
- Flammable liquids
- Explosives
- Compressed gases

**If your organization handles it—we can train on it.**

Helping companies bring their  
innovations to the global market, **SAFELY**

# HazMat Safety Consulting®

AN AMERICASE COMPANY

- **Applicable:** Reinforces real workflows, not hypothetical situations.

Whether you ship lithium batteries, flammable liquids, explosives, engines, compressed gases, or eCommerce and retail limited quantity products, your training reflects your real-world needs—not a generic curriculum.

## Flexible Delivery: In Person, Virtual, or eLearning

HSC understands that gathering your entire team at once isn't always possible. That's why we offer training in the format that fits your operation best:

- **In-Person Instruction:** Live, classroom-style training at your facility for hands-on interaction.
- **Live Webinars:** Remote, instructor-led sessions that can be recorded for employees who can't attend live.
- **Custom eLearning Modules:** Interactive courses tailored to your operations and compatible with your Learning Management System (LMS) for ongoing team training.

Whatever the format, your employees receive the same expert guidance grounded in real regulatory experience.

## A Proven Customization Process

To ensure every course is accurate and specific to your operation, HSC conducts a structured discovery process that may include:

- On-site assessments (when possible) to observe real workflows.
- Conference calls with operations, shipping, and compliance teams.
- Detailed questionnaires to gather material-specific information.

This approach ensures your program directly reflects your organization's products, responsibilities, and procedures—reducing errors, increasing confidence, and strengthening compliance.

**Relevant, Efficient, and Compliant—Training That Works the Way You Do.**

## The HazMat Safety Consulting Advantage

- **Experience that matters:** Training designed by former DOT PHMSA regulators.
- **Highly tailored:** Built around your exact materials, modes, and workflows.
- **Multiple delivery options:** In-person, webinar, and LMS-ready eLearning.
- **Reduced training time:** No unnecessary content—only what your team truly needs.
- **Compliance confidence:** Helps prevent the most cited hazmat violation: *training deficiencies*.
- **Increased comprehension and retention:** Relevant content that applies to your team's operations.

## Get Customized Training That Protects Your People—and Your Business

Partner with HazMat Safety Consulting to build a training program that reduces risk, strengthens compliance, and empowers your workforce.
